

YOUR GO-TO SOURCE FOR SINGLE-PLY RE-ROOFING

WHAT WE PROVIDE

We are the ultimate source for commercial roofing installations throughout California. Our technicians have over 20 years of experience in installing roof systems. We have stayed up-to-date in the latest roofing trends and the newest technology to ensure that we offer the best services to our customers. Single-ply re-roofing is a growing trend for flat roof covering, and it comes with several advantages.

This is a first class operation! I have never seen a roofing company like these guys in my 30 plus years in facilities. Their reports are awesome and the staff and crew are too. I love C.I. Services and so do all my 73 plus roofs.” - Steve K.

RESISTANT TO THE ELEMENTS

The single-ply membrane resists UV rays and is not affected by possibly hazardous microorganisms.

DURABLE

The hot weld across this membrane defends your building from severe weather conditions and extreme temperatures.

FIRE RETARDANT

The PVC Single-Ply composition is fire resistant and even self-extinguishing. This is an excellent precaution for any business concerned about fire safety.

RESISTS CHEMICALS

The material is naturally resistant to harmful chemicals like acid rain or other forms of acidic flow.

ENVIRONMENTALLY-FRIENDLY

Their longevity and ability to be recycled makes the single-ply membrane a superior choice in eco-friendly roofing materials.
